

Jefferson Gakuya - Full-Stack Developer

Nairobi, Kenya | jeffersongakuya@gmail.com | (+254) 713-070-350 | [GitHub](#)

PROFESSIONAL SUMMARY

Innovative **Full-Stack Software Engineer** specializing in **JavaScript**, **TypeScript**, and **Go**, with extensive experience in domain-driven design and clean architecture. Expert in building scalable web and mobile applications using **React.js**, **Next.js**, and **Node.js**, with a strong focus on code quality, maintainability, and automated testing. Proven track record of designing robust domain models and implementing clean, testable codebases that deliver exceptional user experiences and business value.

TECHNICAL SKILLS

- Languages: JavaScript (ES6+), TypeScript, Go, PHP
 - Frontend: React.js (Next.js), React Native, HTML5, CSS3 TailwindCSS, Framer Motion
 - Backend: Node.js, Express.js, Go (Gin/Echo), Django, Flask, RESTful APIs
 - Architecture: Domain-Driven Design, Clean Architecture, Microservices, Event-Driven Architecture
 - Code Quality: ESLint, Prettier, Code Reviews
 - Testing: Jest, React Testing Library, Go Testing, Cypress, TDD/BDD
 - Databases: PostgreSQL, MySQL, MongoDB, Redis
 - DevOps: Docker, CI/CD Pipelines, GitHub Actions, AWS, Vercel
 - Serverless: AWS Lambda, Vercel Functions, Serverless Framework
 - Other: Agile/Scrum Methodologies, System Design, API Design
-

PROFESSIONAL EXPERIENCE

Full-Stack Developer

Four Africa | Nairobi, Kenya

February 2022 - Present

- Architected and developed a high-performance React Native application with Node.js/TypeScript backend, implementing domain-driven design principles to create maintainable and scalable code structures

- Established comprehensive code quality standards using ESLint, Prettier, and automated testing pipelines, resulting in 95% code coverage and 40% reduction in bug reports
- Designed and implemented clean API architectures with TypeScript, following REST and GraphQL best practices, improving API response times by 60%
- Built Next.js applications with TypeScript, implementing server-side rendering and static generation, achieving 25% increase in organic traffic and improved Core Web Vitals scores
- Integrated comprehensive CI/CD pipelines with automated testing, linting, and deployment, reducing deployment time by 70% and ensuring consistent code quality
- Developed custom WordPress solutions in PHP while maintaining clean coding standards and automated testing practices
- Mentored junior developers on clean code practices, domain modeling, and TypeScript implementation

Recent Projects Under Four Africa

- Integrated a dual-payment gateway using Node.js and AWS Lambda for an e-commerce platform, supporting Peach Payments and iPay with secure transaction flows.
- Developed a content management system using Node.js, S3, and DynamoDB for file and document storage, email templates, and secure client data handling.
- Implemented M-Pesa STK Push payment gateway using Next.js API routes for a cancer support organization, optimizing donation flow.
- Applied domain-driven design to manage entities and workflows; optimized API performance using caching and pagination strategies.

Backend Developer Intern

Whip Music Africa | Lagos, Nigeria

November 2021 – February 2022

- Designed and implemented scalable API endpoints using Django Rest Framework with comprehensive test coverage and clean architecture principles
- Optimized database queries and implemented caching strategies, achieving 35% improvement in API response times
- Contributed to establishing coding standards and automated testing practices within the development team

Computer Technician Assistant

Antioch Baptist Computer Labs | Nairobi, Kenya

December 2018 – April 2019

- Provided technical support for hardware, software, and network systems, developing problem-solving skills crucial for debugging complex applications.

PROJECTS

Enterprise E-Commerce App

- Built a scalable multi-tenant e-commerce platform using React.js with TypeScript, Node.js backend, and PostgreSQL
- Implemented domain-driven design with clear entity boundaries, achieving 99.9% uptime and supporting 10,000+ concurrent users
- Established comprehensive testing strategy with Jest, React Testing Library, and Cypress, maintaining 90%+ test coverage
- Integrated real-time inventory management and payment processing with clean, maintainable codebase

React Native Cross-Platform App

- Developed a production-ready mobile application using React Native with TypeScript, implementing offline-first architecture
- Built robust state management using Redux Toolkit and implemented comprehensive error handling and logging
- Achieved 95% crash-free sessions through rigorous testing and code quality practices
- Integrated push notifications, biometric authentication, and real-time data synchronization

Microservices Architecture Project

- Designed and implemented a microservices architecture using Go and Node.js, following domain-driven design principles
- Built event-driven communication between services using message queues and implemented comprehensive monitoring
- Containerized services with Docker and orchestrated with Kubernetes for scalable deployment

EDUCATION

Diploma of Engineering - Computer Science | Moringa School, Nairobi, Kenya

Diploma in Web Design and Development | Nairobis Trust, Nairobi, Kenya

CERTIFICATIONS

- Google Africa Developer Scholarship
- Contributor to open-source TypeScript projects
